NOTE TO UNITED STATES GOVERNMENT RECIPIENTS OF THIS REPORT

U.S. Government officials are invited to inquire about the availability of statistics on U.S.-NME trade other than those presented herein. The Commission's East-West Trade Statistics Monitoring System contains the full detail of U.S. trade with all NMEs as issued by the Census Bureau. These data are maintained by the Commission on an annual, quarterly, and monthly basis, and are generally available within 8 weeks after the close of the monthly reporting period. More information on this service may be obtained from the Chief, Trade Reports Division, USITC, telephone: (202) 252-1255.

Introduction

This series of reports by the United States International Trade Commission is made pursuant to section 410 of the Trade Act of 1974 (19 U.S.C. 2440), which requires the Commission to monitor imports from and exports to certain nonmarket economy countries (NMEs).¹ These countries include those subject to the generally higher statutory rates of duty in column 2 of the Harmonized Tariff Schedule of the United States (HTS) (i.e., those listed in general note 3[b] of the HTS),² and those afforded most-favored-nation (MFN) tariff status in the general subcolumn of column 1 (and thus not listed in general note 3[b], viz, Hungary, the People's Republic of China [China], and Poland).

Under section 410, the Commission publishes a summary of trade data no less frequently than once each calendar quarter for Congress and, until January 2, 1980, for the East-West Foreign Trade Board. As of that date, the East-West Foreign Trade Board was abolished, and its functions were transferred to the Trade Policy Committee, chaired by the United States Trade Representative.

The statute requires that the reports in this series present data on the effect, if any, of imports from NMEs on the production of like or directly competitive articles in the United States and on employment within industries producing those articles. To fulfill this requirement, the Commission developed an automated trade-

statistics monitoring system to identify imports from the NMEs that have grown rapidly and to measure the degree of penetration of such imports. Because comprehensive data on the production of the U.S. manufacturing sector are compiled and published annually rather than quarterly, the monitoring system is run only once each year. However, every quarterly report monitors imports from NMEs and discusses trends that may be significant for U.S. commerce.

Since U.S. trade with several of the NMEs is negligible, the reports focus on those NMEs whose current trade with the United States is at a level that might potentially affect a domestic industry: Bulgaria, China, Czechoslovakia, East Germany, Hungary, Poland, Romania, and the U.S.S.R. Data on U.S. trade with Afghanistan, Albania, Cambodia, Cuba, Laos, Mongolia, North Korea, and Vietnam are also provided in each report and are included in the totals for "All NMEs" throughout the report.

At present, China, Hungary, and Poland are the only NMEs covered by this report that receive MFN tariff treatment from the United States. In the early 1950s, the MFN status of all NMEs was suspended in accordance with section 5 of the Trade Agreements Extension Act of 1951, which provided that the benefits of trade-agreement concessions were not to be accorded to such countries.³ Section 401 of the Trade Act of 1974 reaffirmed the policy of denying MFN tariff treatment to imports from NMEs with the exception of Poland, whose MFN status had been restored in 1960.⁴ However, section 402 of the Trade Act of 1974 authorizes the President to extend MFN status to those countries that meet certain emigration-policy criteria or to waive the application of such criteria when he has received certain assurances. Waivers resulting in MFN status were extended to Romania in 1975, to Hungary in 1978,⁵ and to China in 1980. In February 1988, the Government of Romania informed the U.S. Government that it had decided to renounce MFN status under the terms of section 402, and, inasmuch as all waivers in effect are subject to annual review and renewal by the President, the waiver extended to Romania was accordingly allowed to expire on July 2,

¹ Earlier reports in this series included Yugoslavia among the NMEs whose trade with the United States is monitored. At the suggestion of the United States Trade Representative and after consultation with the appropriate congressional committees, the Commission determined that Yugoslavia would no longer be included in the countries covered by this report. This decision was effective with the 27th report. (*27th Quarterly Report to the Congress and the Trade Policy Committee on Trade Between the United States and the Nonmarket Economy Countries During April-June 1981*, USITC Publication 1188, September 1981, p. 1, hereinafter *27th Quarterly Report*.) In the opinion of many analysts, Yugoslavia is not appropriately classified as an NME. Also, it is not a member of the Warsaw Pact or the Council for Mutual Economic Assistance.

² The following countries or areas are enumerated in general note 3(b) of the HTS: Afghanistan, Albania, Bulgaria, Cambodia (Kampuchea), Cuba, Czechoslovakia, Estonia, the German Democratic Republic (East Germany), Laos, Latvia, Lithuania, Mongolia, North Korea, Romania, the U.S.S.R., and Vietnam. In this report, imports from and exports to Estonia, Latvia, and Lithuania are included in the data on U.S.-U.S.S.R. trade. General note 3(b) does not reflect the designation of these countries as NMEs, but instead reflects actions taken by the President and the Congress with respect to Communist countries or those under Communist control.

These countries were previously listed in headnote 3(d) of the Tariff Schedules of the United States (TSUS). The HTS replaced the TSUS effective Jan. 1, 1989.

³ More specifically, the provision applied to imports from the Soviet Union and from "any nation or area dominated or controlled by the foreign government or foreign organization controlling the world Communist movement."

⁴ This provision was not applicable to countries that had MFN status when the Trade Act of 1974 was enacted.

⁵ On Sept. 26, 1989, the Hungarian Parliament passed a new emigration law. As a result, President Bush reported to the Congress on Oct. 26, 1989, that Hungary was in full compliance with the freedom of emigration requirement of sec. 402 of the Trade Act of 1974. This determination released Hungary from the waiver procedure that had made its MFN status subject to annual renewal.

1988. Poland's MFN status was suspended by the President in October 1982, but was restored in February 1987.⁶

Imports from Communist countries can be subject to market-disruption investigations by the Commission under section 406 of the Trade Act of 1974 (19 U.S.C. 2436). Section 406 was included in the Trade Act of 1974 because of concern, in the view of the Senate Committee on Finance, that a Communist country "through control of the distribution process and the price at which articles are sold," could direct exports "so as to flood domestic markets within a shorter time period than could occur under free market condition[s]."⁷

In the HTS, as noted above, the MFN rates of duty are set forth in the general subcolumn of column 1, and the rates applicable to products of designated Communist countries are set forth in column 2. The latter are, in general, the rates that were established by the Tariff Act of 1930, and they are equal to or higher than the MFN rates. Since many column 2 rates are substantially higher than the corresponding column 1-general rates, actual or potential U.S. imports from countries subject to column 2 rates are affected in some measure by the rates of duty on the specific items involved.

Except as otherwise noted, the trade data in this series of reports are compiled from official statistics of the U.S. Bureau of the Census. Imports are imports for consumption (the sum of directly entered imports plus withdrawals from customs warehouses) at customs value (generally equivalent to f.o.b. value at the foreign port of export). Exports are domestic exports (U.S.-produced goods) at f.a.s. value.

Beginning with the *58th Quarterly Report*,⁸ the trade data in this series have been presented in terms of the Harmonized System (HS). The detailed analysis of imports is now based on the six-digit subheadings of the HTS, and that of exports is based on the six-digit subheadings of the HS-based Schedule B (1988 Edition). The analysis of aggregate trade levels and trends is

⁶ The reason cited for the suspension was the failure of Poland since 1978 to meet certain import commitments under its Protocol of Accession to the General Agreement on Tariffs and Trade (GATT), but a more immediate reason was the Polish Government's banning of the Solidarity trade union in October 1982. The restoration of Poland's MFN status in 1987 completed the gradual removal, over more than a 3-year period, of a number of economic sanctions that the United States had enacted against the Polish Government in response to its imposition of martial law in 1981 and its subsequent repression of the Polish people. Since Poland's MFN status was initially restored prior to the enactment of the Trade Act of 1974, its reinstated MFN status is not subject to either the review or renewal provisions of section 402.

⁷ U.S. Congress, Senate, *Trade Reform Act of 1974: Report of the Committee on Finance...*, 93d Cong., 2d sess., 1974, Rep. No. 1298, p. 210.

⁸ Throughout the report, citations in this abbreviated form refer to earlier reports in this series.

presented in terms of HTS and HS-based Schedule B sections, and the discussion of this trade also includes references to chapters (two-digit numbers) and headings (four-digit numbers).⁹ These new classifications for reporting trade between the United States and the NMEs have replaced the seven-digit items of the Tariff Schedules of the United States Annotated (TSUSA), seven-digit Schedule B Nos., and Standard International Trade Classification (SITC) Revision 2 categories used in all earlier reports in this series. Consequently, since the trade data for 1988 and earlier periods were compiled using the old classifications and then converted to the HS-based system, the values and quantities shown for all commodities exported and imported prior to 1989 must be treated as estimates.

The U.S. International Trade Commission is an independent, factfinding agency. Thus, any statements made in the quarterly reports on U.S. trade with the NMEs do not necessarily reflect the views of executive branch agencies and should not be taken as an official statement of U.S. trade policy. These reports are also done independently of other work conducted by the Commission, and nothing in the reports should be construed to indicate how the Commission would find in an investigation conducted under other statutory authority.

This quarterly report contains a summary of U.S. trade with the NMEs during July–September 1989 and, where appropriate, during the first three quarters of the year. The report also includes a special section on radio and television receiving equipment from China, one of the product groups identified by the Commission's automated East-West trade statistics monitoring system.¹⁰ This section discusses the U.S. industry and U.S. market, U.S. imports from China and other sources, and such information as could be obtained on the industry in China.

Additional copies of this report (USITC Publication 2250) can be obtained by calling (202) 252-1809 or by writing to the Office of the Secretary, U.S. International Trade Commission, 500 E Street SW., Washington, DC 20436. Requests to receive the report on a quarterly basis should be directed to (202) 252-1255 or to the Trade Reports Division, U.S. International Trade Commission, 500 E Street SW., Washington, DC 20436.

⁹ The Harmonized System is a hierarchical coding system, with the first two digits of a six-digit subheading representing one of the chapters into which the sections are divided, the second two digits representing a heading in a chapter, and the third two digits representing the subdivision of a heading.

¹⁰ For coverage of this year's run of the East West trade statistics monitoring system, see the *59th Quarterly Report*, pp. 12-67. The system scans all manufactured goods imported from the NMEs and identifies product groups that may warrant further examination on the basis of two criteria: penetration of the U.S. market by imports from an NME supplier and from suppliers worldwide and the rate of growth of imports from an NME source.

Third-Quarter Developments in Trade Between the United States and the Nonmarket Economy Countries

Two-way merchandise trade between the United States and the nonmarket economy countries (NMEs) increased by 41.0 percent, from \$4.6 billion during July–September 1988 to \$6.5 billion during July–September 1989 (table 1). U.S. exports to the NMEs increased by 31.3 percent, from \$1.9 billion to \$2.4 billion, and U.S. imports from the NMEs increased by 47.4 percent, from \$2.8 billion to \$4.1 billion, a record quarter-to-quarter rise in imports from these countries. The U.S. deficit of \$1.7 billion in trade with the NMEs during July–September 1989 was also a quarterly record. The previous quarterly record U.S. deficit of \$934.1 million in trade with these countries was registered during the corresponding period of 1988.

At \$1.5 billion, the U.S. deficit in trade with the NMEs during the first three quarters of 1989 was smaller than during July–September. The third-quarter deficit of \$1.7 billion was preceded by a deficit of only \$221.7 million during the second quarter of 1989 and by a surplus of \$353.0 million during the first quarter. During January–September 1989, the United States registered a surplus of \$2.7 billion in trade with the Soviet Union, but this was more than offset by deficits of \$4.0 billion in trade with China and of \$198.4 million in trade with Eastern Europe.¹¹

U.S. exports to the NMEs declined during July–September 1989 for the second consecutive quarter (fig. 1). The downturn to a large extent reflected the pattern of U.S. corn and wheat shipments to the Soviet Union. After reaching a combined value of \$984.9 million during January–March 1989, these shipments declined to \$872.7 million during the second quarter and

Note.—Import figures in this and all other tables in this report are Census-based imports for consumption at customs value. Exports are domestic exports only, including Defense Department military assistance shipments, and are valued on an f.a.s. basis. Values presented for periods before 1989 in this and other tables in this report may not agree exactly with values previously published. Because data for periods before January 1, 1989, were compiled under the old systems of classification and then converted to the new HS-based system, the values shown represent estimates derived from the old data allocated as if the new classification system had been in effect during those periods.

fell to \$224.3 million during the quarter under review. Shipments of corn to Eastern Europe—the leading U.S. export to this market during the first three quarters of 1989—also declined substantially during July–September. The overall downward trend was partly offset by a sharp third-quarter rise, led by increased wheat shipments, in U.S. exports to China.

From July–September 1988 to July–September 1989, the value of U.S. shipments to China increased from \$1.3 billion to \$1.8 billion, a new quarterly high. U.S. exports to the Soviet Union rose from \$304.3 million to \$451.1 million, and those to Eastern Europe declined from \$196.7 million to \$178.8 million. This decline was almost entirely attributable to a drop in U.S. shipments to East Germany. (See table 2 and, for third-quarter 1989 exports by both country and Schedule B section, table A-2.)

U.S. exports to all NMEs increased by 34.2 percent, from \$6.3 billion during January–September 1988 to \$8.5 billion during the first three quarters of 1989. The increase was led by an expansion in exports to the Soviet Union, owing largely to a significant rise in corn shipments, but also resulted from growth in shipments to both China and Eastern Europe. U.S. exports to the Soviet Union increased by 60.0 percent, from \$2.0 billion to \$3.2 billion; exports to China grew by 23.7 percent, from \$3.6 billion to \$4.5 billion; and those to Eastern Europe rose by 15.3 percent, from \$675.7 million to \$779.3 million (tables B-3,

B-2, and B-4). Reflecting the strength of this rise in shipments to the Soviet Union, its share of total U.S. exports to the NMEs increased from 31.9 percent during 1988 to 37.9 percent during January–September 1989, and China's share declined from 57.7 to 52.8 percent (fig. 2). The share of the East European countries, led by Poland, decreased from 10.0 percent during 1988 to 9.2 percent during the first three quarters of 1989.

U.S. exports to the NMEs of commodities classified as cereals (sec. 2, ch. 10)—consisting of wheat, corn, grain sorghum, and other grains—expanded from \$1.8 billion during January–September 1988 to \$3.3 billion during the corresponding period of 1989. The value of U.S. shipments of wheat (heading 1001) to the NMEs increased by 36.2 percent, from \$1.3 billion to \$1.8 billion, and U.S. exports of corn (heading 1005) to these countries more than tripled in value, from \$470.0 million to \$1.4 billion.¹² Wheat was the leading U.S. export to China during the first three quarters of

¹² Reflecting an increase in the unit value of wheat, from \$93.22 per metric ton to \$151.64 per metric ton, the quantity of U.S. wheat shipped to the NMEs declined from 13.9 million metric tons during January–September 1988 to 11.6 million metric tons during January–September 1989. The rise in the value of U.S. corn exports to the NMEs from the first three quarters of 1988 to the corresponding period of 1989 reflected a much smaller increase in unit value, from \$101.98 per metric ton to \$119.37 per metric ton, and an increase from 4.6 million metric tons to 12.0 million metric tons in the quantity of these shipments.

1989 (table C-3) and the second-ranking commodity among U.S. exports to the Soviet Union (table C-5), with corn being the leading U.S. export to the Soviet Union and to Eastern Europe (table C-7). Among other agricultural commodities, increased shipments of soybean oilcake (sec. 4, heading 2304) to the Soviet Union and of cotton (sec. 11, heading 5201) to China also contributed substantially to the expansion in U.S. exports to NME markets.

Among U.S. exports of manufactures to the NMEs, machinery, mechanical appliances, electrical equipment, and their parts and accessories (sec. 16), with China as the principal customer, increased from \$899.1 million during January-September 1988 to \$1.2 billion during January-September 1989. Also led by increased sales to China, U.S. shipments of fertilizers (sec. 6, ch. 31) to the NMEs expanded from \$253.8 million to \$584.0 million, and those of aircraft and aircraft parts (sec. 17, ch. 88) rose from \$201.7 million to \$500.1 million. The delivery of two aircraft to Poland, valued at \$126.3 million, contributed to the growth in these exports. Perhaps the most noteworthy increases among manufactured goods were in exports of iron and steel (sec. 15, ch. 72) and of articles of iron or steel (sec. 15, ch. 73). The combined value of U.S. shipments to the NMEs in these two product groups expanded from only \$16.8 million during January-September 1988 to \$304.4 million during the first three quarters of 1989. This gain was largely the result of a sharp increase in these exports to China but also reflected a substantial rise in shipments to the Soviet Union.

The upward trend in U.S. imports from the NMEs—with quarterly fluctuations determined almost entirely by changes in the value of shipments from China—continued with increased momentum during the quarter under review (fig. 3). Compared with the preceding quarter, U.S. imports from China declined slightly during January-March 1989, increased by \$375.9 million during April-June, and increased by \$944.4 million during July-September 1989. The result was a new record high in imports from China (and therefore all NMEs) during two consecutive quarters. During the third quarter of 1989, the value of U.S. shipments from China amounted to \$3.6 billion, up 56.1 percent from \$2.3 billion during the corresponding period of 1988 (table 3). U.S. imports from the Soviet Union increased from \$115.5 million during July-September 1988 to \$163.5 million during July-September 1989, and imports from Eastern Europe declined from \$367.2 million to \$349.0 million.

The value of U.S. shipments from all NMEs increased by 31.4 percent, from \$7.6 billion during January-September 1988 to \$10.0 billion during January-September 1989. U.S. imports from China increased by 41.6 percent, from \$6.0 billion to \$8.5 billion, whereas imports from the Soviet Union rose by 44.9 percent, from \$371.3 million to \$538.0 million, and those from Eastern Europe declined by 21.3 percent, from \$1.2 billion to \$977.8 million. This decline was mainly the result of a steep drop in U.S. imports from Romania.

China's share of U.S. imports from the NMEs increased from 79.6 percent during 1988 to 84.8 percent during January–September 1989 (fig. 4). The Soviet Union's share was essentially the same during both periods, but Eastern Europe's share declined from 14.9 percent during 1988 to 9.7 percent during the first three quarters of 1989.

The \$2.5 billion expansion in U.S. imports from China from January–September 1988 to January–September 1989 reflected a rise in shipments in almost every import category, but also resulted from exceptionally large increases in imports of a few product groups, consisting mainly of manufactured consumer goods (see table B-2 for data by commodity section). Among these imports were electrical machinery and equipment, sound recorders and reproducers, and television image and sound recorders and reproducers (sec. 16, ch. 85), which increased from \$579.4 million to \$1.1 billion; toys, games, and sports equipment (sec. 20, ch. 95), which increased from \$727.0 million to \$1.2 billion; and knitted or crocheted articles of apparel and clothing accessories (sec. 11, ch. 61), which increased from \$424.1 million to \$783.5 million. Most of

the increase in this category was attributable to the growth in imports of sweaters, pullovers, sweatshirts, and similar articles (heading 6110), from \$255.8 million to \$595.5 million. Imports of articles of apparel and clothing accessories, not knitted or crocheted (sec. 11, ch. 62) expanded from \$980.1 million to \$1.2 billion, and those of footwear (sec. 12, ch. 64) rose from \$239.8 million to \$508.6 million. The combined value of U.S. imports from China in these five chapters, or product groups, increased by \$1.8 billion from January–September 1988 to the first three quarters of 1989. (See table C-4 for the leading items imported in each of these groups.)

Much of the expansion in U.S. imports from the Soviet Union from January–September 1988 to the corresponding period of 1989 was attributable to increased shipments of mineral fuels, mineral oils, and their products (sec. 5, ch. 27), consisting of both crude petroleum and refined petroleum products. On the other hand, a steep decline in shipments of refined petroleum products (heading 2710) from Romania was the major reason for the overall decrease in U.S. imports from Eastern Europe over the period.

Special Section: Radio and Television Receiving Equipment From China and Competitive Conditions in the U.S. Market

Introduction

Each year at this time, one or more product groups imported from an NME source are selected for more detailed examination from among those identified by the Commission's East-West trade statistics monitoring system. This automated import-monitoring system, which has been run annually since 1982, is designed to address a congressional requirement that the Commission's reports on U.S. trade with the NMEs provide data on "the effects of such imports, if any, on the production of like, or directly competitive, articles in the United States and on employment within the industry which produces like, or directly competitive, articles in the United States."¹³

In the 1989 run of the monitoring system, the identification of those imports that may warrant an analysis of their effects on a U.S. industry and on competitive conditions in the U.S. market was based on the following criteria: (1) at least

¹³ 19 U.S.C. 2440.

2-percent penetration by imports from an NME source in conjunction with at least 20-percent penetration by imports from all sources, and (2) import growth (in terms of value) from an NME source of at least 15 percent from 1987 to 1988 and from January-June 1988 to January-June 1989. Radio and television receiving equipment from China was selected for further examination from among eight product groups—all imports from China—that met these criteria.¹⁴

Description and Uses

Radio and television receiving equipment is apparatus used for converting electromagnetic waves into audible or visible forms. Included in this equipment are television receivers, radio broadcast receivers, radio/tape player combinations, and radio/tape recorder combinations. The equipment is used for entertainment and communication purposes. For the purpose of this report, radio and television receiving equipment has been broadly divided into several categories: radio receivers; radio receiver combinations, including sound recording

¹⁴ The other seven imports from China that met the criteria were rubber or plastic footwear, footwear except rubber, leather gloves, luggage of leather or other materials except plastic, handbags and other personal leather goods, ceramic sanitary and industrial wares, and toys and amusement or sporting goods. A detailed discussion of the East West trade statistics monitoring system and the results of the 1989 run is presented in the *59th Quarterly Report*, pp. 12-67.

and reproducing apparatus; color television receivers; and monochrome television receivers.

The U.S. Industry

A total of 16 firms operating an estimated 34 establishments produce television receivers in the United States, although only 5 of these firms are vertically integrated backward into the production of color picture tubes, and only 1 firm is vertically integrated backward into the production of picture-tube glass. This compares with 17 firms operating 30 establishments in 1984. There were about 26,000 workers in television production in 1988, as opposed to 28,000 in 1984. The U.S. industry is concentrated in California, Illinois, Indiana, and Tennessee, areas that have access to major markets and large labor pools. Zenith Electronics Corp. is the only significant U.S. owned firm remaining in the industry. The largest producer in the industry is Thomson Consumer Electronics Inc. (TCE), a subsidiary of Thomson, which is owned by the French Government and is one of the largest multinational firms in Western Europe. TCE purchased the television production facilities of General Electric and RCA in 1987.

The production of color television receivers in the United States is similar to that in most other countries, including China. The most significant difference between the television receiver industries in the United States and China is that China continues to produce black and white sets. The largest color sets currently made in the United States have a screen size of 27 inches, measured diagonally. Although it is unclear whether China is currently producing sets this large, a plant now being upgraded will have the capability to produce 26-inch sets. Sets with screens larger than 27 inches are currently manufactured only in Japan, but there are plans to begin production of 31- and 35-inch sets in the United States sometime in 1990. Japan is also the only producer of liquid-crystal display (LCD) television receivers, and no U.S. production is planned. Finally, projection television receivers are produced only in limited quantities by firms located in the United States.

There are about 150 establishments manufacturing radio receiving equipment in the United States. About a quarter of these establishments are located in the Mid-Atlantic states, primarily New York, and another quarter are located in the Pacific States, almost all of them in California. Employment in the industry has remained fairly steady, about 40,000 employees from 1984 through 1988. There is little or no production of radio receiving equipment for consumer use in the United States. With the exception of a limited amount of assembly of equipment intended for installation in automobiles, U.S. production of radio receiving equipment is intended for communication purposes.

From 1984 to 1988, U.S. shipments of household television receivers (in millions of dollars) were as follows:

1984	1985	1986	1987	1988
4,120	3,970	4,000	3,264	3,080

Although these shipments declined by 25 percent during this period, annual U.S. shipments of radio receiving equipment remained essentially unchanged, as shown below (in millions of dollars):

1984	1985	1986	1987	1988
4,030	3,900	3,970	3,835	3,990

Capacity utilization for U.S. television production was 70 percent in 1987 compared with 90 percent in 1983. Capacity utilization for radio receiver production in the United States was approximately 87 percent in 1987 and 74 percent in 1983. U.S. shipments of television and radio receivers are reported under Standard Industrial Classification (SIC) 3651.

The Industry in China

The production of television and radio receiving equipment in China has increased dramatically over the past decade. Chinese production of television receivers rose from 10 million units in 1984 to almost 25 million units in 1988 (table 4), and the production of radio receivers rose from less than 14 million units in 1978 to over 25 million in 1985.

Very little information could be obtained on radio production in China. The following statistics were compiled by the Embassy of The People's Republic of China in Washington, D.C.:

Year	Millions of units
1965	0.8
1978	13.9
1980	27.2
1984	28.3
1985	25.2

Chinese television and radio receivers are generally less sophisticated than those produced in developed countries. Television receivers made in China generally have mechanical "barrel" tuners rather than random-access, solid-state tuners. Also, picture tubes produced in China are lower voltage, in the range of 18,000 volts rather than 28,000 volts, which is common in more advanced receivers. Higher voltage picture tubes produce brighter images.

The General Electric Co. sold its color television picture tube plant to China in 1984. That plant was moved to China and rebuilt, and it now produces about 500,000 13-inch tubes annually. When an upgrading of the plant is completed, it will also produce 19-, 20-, and 26-inch tubes. In addition, joint ventures with Hitachi, Matsushita, and Philips are leading to the construction of other plants. Color picture tube production in China was projected to be in the range of 1.0 million to 1.5 million in 1989. By the end of 1990, China is expected to have the capability of producing 5 to 6 million color picture tubes per year and, within 3 to 4 years, the capability of producing 9 to 10 million per year. The remaining tubes needed to produce television receivers are imported from Japan and Korea. However, restrictions have recently been imposed on imports of certain electronics products and parts into China and, in addition, imports of several types of electronics production assembly lines have been temporarily banned, reportedly because duplicate imports have resulted in a redundancy of production capacity or construction.¹⁵ Parts for products made for export were exempt from restriction, and may be imported without licenses or the payment of import taxes.

Most Chinese television production is reserved for internal consumption, with only 10 to 20 percent earmarked for export. Virtually all television receivers exported to the U.S. market

¹⁵ *China Economic News*, vol. 10, No. 50 (Dec. 25, 1989), p. 2. The restricted imports include TV sets, except graphic displays; tape recorders, including radio-cassette-recorder players, but not cassette players; and complete video recording units and video recorders (players). A temporary import ban has been placed on color and black and white TV set assembly lines, tape recorder and black and white TV tube assembly lines, color TV accessory production lines, and color picture tube production lines. The importation of certain other types of electronics production assembly lines has also been banned.

are sold as private-label brands. Chinese factories, generally small in size relative to factories in developed countries, were typically maintaining small inventories since TV sets were sold in the domestic market almost as fast as they were produced. However, stockpiles of TV sets have recently been accumulating in Chinese warehouses because of Government efforts to limit consumer demand.¹⁶ A consumption tax of 600 to 900 yuan has been imposed by the Government, increasing the price of a 21-inch color television set to approximately 3,000 yuan—a markup of nearly 50 percent.¹⁷ The number of outlets selling television receivers in China has also recently decreased dramatically since the Government banned the sale of television receivers in non-Government-owned stores, and producers have begun to respond to the drop in sales. China manufactured about 2 million television receivers in October 1989, down 16 percent from October 1988. Of this total, 640,000 were color television receivers, down 38 percent from the corresponding period of 1988.

Television signals are broadcast throughout the world using three major broadcast systems: NTSC, the most prevalent, used in the United States, Japan, Central America, and most of South America; PAL, used in most of Europe and parts of South America, the Middle East, and the South Pacific; and SECAM, used in most of the Soviet Union and in parts of the Middle East, Europe, and Africa. The system used in China is a derivative of PAL, and the only other countries where it is used are North Korea and Romania. Economies of scale are therefore limited because a television intended for use in China has a different design from a television intended for use in almost any other country in the world.

The China National Electronics Import & Export Corporation (CNEIEC), founded in 1985, is not a producer of television or radio receivers, but functions as an international trading and licensing organization representing 200 large and small domestic manufacturers. CNEIEC's aim is to build export sales to \$1 billion annually over the next 5 years, with 50 percent of these exports

¹⁶ The high level of consumer demand is regarded as the major cause of China's record rate of inflation. The annualized rate of inflation (as measured by the retail price index) was 25.5 percent during the first 6 months of 1989, and despite some success in controlling price increases, the Chinese Government is expected to report an inflation rate of around 20 percent for the year (*China Economic News*, vol. 10, No. 49 (Dec. 18, 1989), p. 1).

¹⁷ *The Japan Economic Journal*, Dec. 2, 1989, p. 25. The amount of 3000 yuan is approximately equal to \$810 based on an exchange rate of 3.7 yuan to 1 U.S. dollar. The Chinese Government has been maintaining this rate, within narrow limits, by unofficially pegging the yuan to the dollar since shortly after a major devaluation in mid-1986. However, on Dec. 16, 1989, China announced that the yuan would be devalued by 21.2 percent against the U.S. dollar.

going to the United States. This goal excludes the exports of joint ventures, which are allowed to retain their foreign-exchange earnings to import components and materials or meet other operational expenses.

U.S. Imports, Total and From China

As is shown in Table 5, television receivers with a landed, duty-paid, value of \$2.1 billion were imported into the United States in 1988. Of this amount, imports of color sets accounted for \$1.9 billion, and imports of monochrome sets were valued at \$214 million, continuing a decline that began in 1982. U.S. imports of radio receivers (including combinations) were valued at \$5.7 billion in 1988, consisting of \$4.5 billion in imports of radio receivers and \$1.3 billion in imports of combination sets.

Television imports from China rose from \$13,000 in 1984 to over \$17 million in 1988. During the first 9 months of 1989, these imports were valued at \$59 million. Although imports from China accounted for 1 percent or less of U.S. television imports through 1988, they accounted for 4 percent of total imports during the first 9 months of 1989, when China was the seventh largest exporter of television sets to the United States. During the period covered by table 5, color television receivers made up between 68 percent and 100 percent of the imports from China. They constituted 70 percent of all imports of television receivers from China during 1988 and 72 percent of the total during January–October 1989.

Television receivers imported into the United States are often completely unassembled or unfinished receivers (kits) containing a cathode-ray picture tube. These kits are usually imported by subsidiaries of Japanese and Korean firms that have established U.S. assembly operations. The duty rate for television receivers applies to the color picture tubes contained in these kits, rather than the higher rate of duty that would be assessed if the tubes were imported separately. The United States imported no kits from China during 1984–88.

U.S. imports of radio receivers from China rose from \$23 million in 1984 to \$289 million in 1988, an average annual increase of 88 percent. The major categories of radio receivers imported from China are portable radio/tape player combinations, portable radios, AC-powered radio/tape player combinations, and AC-powered clock radios. These four categories, each of which amounted to about \$50 million in landed duty-paid value, together accounted for about 70 percent of all U.S. imports of radio receivers from China in 1988. China's rank as a supplier rose from tenth to sixth place during this period, and its share of these U.S. imports increased from 1 to 5 percent.

China qualifies for most-favored-nation (MFN) duty rates. The current MFN rate of duty for television receiver imports is 5 percent ad valorem. The current MFN rate of duty for imports of radio receiving equipment ranges from 3.7 to 8 percent ad valorem.

The U.S. Market

Color television receivers are generally sold through one-step distribution in the United States, with factories selling directly to retailers, whether individual retailers, discount merchandise chains, or general merchandise chains such as Sears Roebuck and J.C. Penney. Buying groups, consisting of several retailers acting as a single unit to increase their purchasing power, have become a growing force in the market during the past decade as sales by traditional department stores have decreased.

The U.S. channels of distribution for radio receiving equipment for consumer use are generally one step as well. In many cases, a retailer will contract with a private-label manufacturer in the Far East to manufacture products for sale under the retailer's name. Radio receiving equipment for use in communications is sold through both one-step distribution and two-step distribution, where the retailer buys from an importer rather than directly from the manufacturer. The U.S. market for both television and radio receiving equipment is highly price competitive.

INDEX

Each Quarterly Report to the Congress and the Trade Policy Committee on Trade between the United States and the Nonmarket Economy Countries contains:

- (1) summary of developments in U.S.-NME trade during that calendar quarter and cumulatively during that year, with the summary of the fourth quarter as an annual review;
- (2) summary tables and figures depicting changes in the value of U.S.-NME trade, total and by individual country, and individual country shares of this trade during or through that calendar quarter;
- (3) a series of tables describing the major commodity groups and leading items in trade between the United States and each of the NME countries during or through that calendar quarter, by SITC sections and by Schedule B Nos. (exports) and TSUSA items (imports) through the *57th Quarterly Report* and by Harmonized System-based (HS-based) sections and by HS-based Schedule B and Harmonized Tariff Schedule (HTS) subheadings beginning with the *58th Quarterly Report*.
